DEMAND **ANKA**
BLUE NUT
FITTINGS FOR POLYTHENE PIPE

Now you can forget
about hand-tight
and make it
ANKA TIGHT

ANKA Pipe Fittings are used extensively in New Zealand agricultural, horticultural, irrigation & industry. Manufactured from high grade glass fibre reinforced nylon, these fittings are strong and lightweight. Designed to fit a large range of New Zealand polythene pipes, Australian Rural B, Irish Imperial and a variety of flexible hoses, both suction and pressure.

LEADING WITH KNOWLEDGE

- Extremely robust **BLUE NUT** that can be tightened way beyond hand-tight for a better seal.
- **BLUE NUT** has no sharp edges making tightening it to hand tight a breeze.
- **BLUE NUT** makes identification and in field location much easier.
- The glass fibre fill added to the **BLUE NUT** plastic in manufacture, gives incredibly strong gripping ridges for mechanical tightening.

- Once pipe is pushed over the sealing barbs, a ridge is created allowing the **BLUE NUT** to be tightened

- The captive **BLUE NUT** is permanently held onto the fitting body so it can't become separated and lost.

ANKA polythene pipe fittings are quick and easy to fit. Simply push the pipe over the barbs up to the "stop" then tighten the **BLUE NUT**. The double barb gives a large surface area for the pipe to grip onto. In most situations **ANKA** Fittings can be fitted cold to pipe. The **ANKA** Double Barb is a feature of the 25mm-50mm fittings.

Step 1. Push the **ANKA BLUE NUT** fitting onto pipe.

Step 2. Tighten the **BLUE NUT** by hand then wrench.
